

# *Model 840* DYE SPRAYER KIT

The Harvest Tec Model 840 Dye Sprayer Kit is a simple and effective way to visibly mark the wet areas on your large square bales. Compatible with the Model 596 Automatic Applicators or Model 500 Moisture Monitors for large square balers, the 3-gallon system is mounted near the bale chamber with the spray tips on either the side or on top of the bale chamber.

When the adjustable high moisture alarm sounds on your display, the system will spray a food-grade, red-colored dye that will visibly mark the exact location of the wet spots within the bale for a quick and easy reference when choosing and sorting bales.

Red dye signifies wet spots in bale
